

Proposed Logic Model for Community Development Plan

The Community Development Plan is a shared strategic plan designed and owned by community stakeholders, establishing common objectives in order to accomplish together what we cannot achieve on our own.

Following extensive consultation, the QCGN proposes to create four community roundtables where stakeholders will gather, network, exchange information, develop their skills and knowledge and work together to set objectives for collective action. Each roundtable will have a designated area of focus to address a particular set of community needs.

DEVELOPMENT AREA: Broad area of focus, based on consultations, where community capacity can be developed to strengthen vitality (ex: Funding, Data, Representation, Organizational & Network Strengthening)					
OBJECTIVE: Clear target for collective action to develop capacity within this area.					
<i>Proposed Action</i>	<i>Timeline</i>	<i>Responsible</i>	<i>KPI</i>	<i>Output</i>	<i>Outcomes</i>
What steps are needed to reach objectives?	When do we want this action to be completed?	Which stakeholder(s) will be responsible to lead or coordinate action?	What indicators can be used to measure the success/impact of actions taken?	What will be the immediate results of action?	How will output contribute to improved community vitality?

The four development areas respond to broad trends observed during the 2020-2021 consultation process. By developing community capacity in each of the respective areas of funding, data and information, representation and organizational and network strengthening, the English-speaking community sector of Quebec will be equipped to protect, promote and increase community vitality. This approach:

- Creates cohesion by addressing transversal needs and challenges,
- Regroups diverse stakeholders according to common interests,
- Provides framework for guiding collective action with measurable impact,
- Supports effective priority-setting by taking holistic approach to community development.
