LIST OF FIGURES

Figure 1: Distribution of monitoring forms sent to recipients for the 2016-2017 academic year

** In this document, the masculine form is used to simplify the text.

INTRODUCTION

This document is the second annual report on the monitoring of the McGill Health and Social Services Community Leadership Bursary Program.¹ It aims to present data related to bursaries awarded for the 2014-2017 period, based on data collected during the 2016-2017 academic year, outlining their distribution by region and other variables such as level of study, program of study, and recipients' medium-term intentions. The report also provides a profile of graduate recipients for whom post-graduation follow-up was required during the period covered. Since this is not a research or evaluation report, data presented in the report are merely descriptive.

Presentation of the results is divided into three separate but complementary sections. General results are first outlined, gathering together all recipients of the 2014-2017 Bursary Program including graduate and non-graduate recipients monitored in 2016-2017. Following this overview there are sections for each of the subgroups monitored, namely 1) non-graduate recipients and 2) graduate recipients, a) for six months and b) for one year or more.

METHODOLOGY

Data presented in this report were collected between the months of April 2016 and March 2017. During this period, follow-ups targeted all recipients of the Bursary Program for the 2016-2017 academic year including recipients from the previous grant period (2014 to 2016) who are still studying. The thirteen² community networks involved in the Bursary Program took part in the follow-ups conducted during the year 2016-2017.

RECRUITMENT

¹ The term "Bursary Program" will be used in this document to refer to the Health and Social Services Community Leadership Bursary Program.

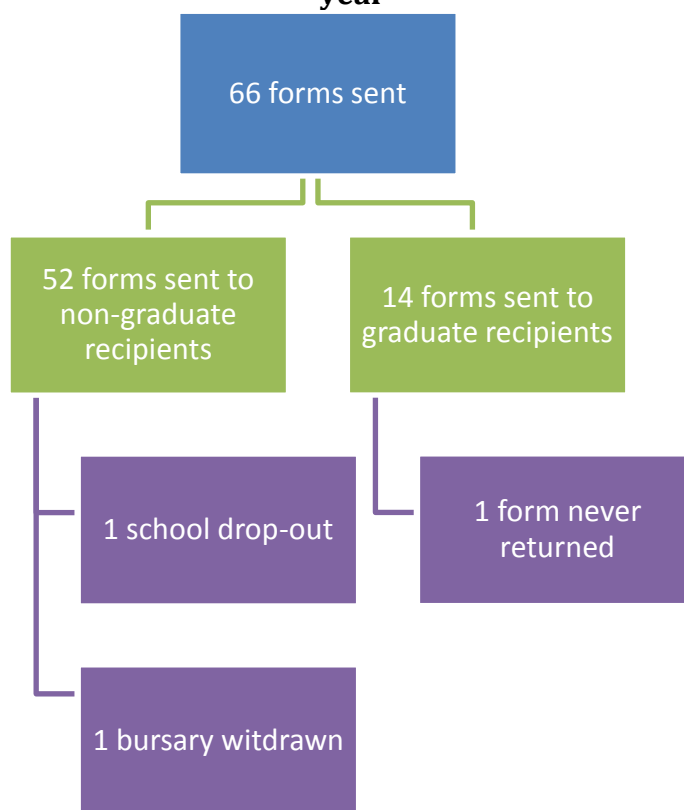

² The Townshippers' Association covers two regions: Estrie and Montérégie. For Bursary Program purposes, this association is counted as two community networks: Townshippers Estrie (05) and Townshippers Montérégie Est (16).

All recipients monitored during the 2016-2017 academic year were targeted through the Bursary Program recipients' repertory covering the 2014-2017 period. All relevant information³ concerning every single recipient is recorded in this repertory, which is updated after each follow-up procedure. On the basis of this information, we are able to identify which recipients must be monitored for each follow-up phase.

DATA COLLECTED

A total of 66 monitoring forms were forwarded during the period covered, of which 52 were for non-graduate recipients and 14 were for graduate recipients.⁴ In the end, only 63 forms were completed and returned.⁵ Follow-ups with graduate recipients scheduled between the months of April and September 2017 will be included in the next bi-annual report scheduled in fall 2017.

Figure 1: Distribution of monitoring forms sent to recipients for the 2016-2017 academic year

³ This includes status (graduate vs non-graduate), contact information, program of study, and the date of expected graduation.

⁴ Among them, nine had graduated six months earlier and five had graduated a year earlier or more.

⁵ Reasons explaining the absence of the three monitoring forms: a school drop-out, a bursary withdrawn due to a change in field of study, and a form that has never been returned despite several reminders.

DATA ANALYSIS

Upon receipt of the completed forms, data were exported to an Excel file from which descriptive statistics were generated for quantitative data. Collected qualitative data that emphasize job search activities or provide further information concerning recipients' files were identified to be highlighted in the report. Comments from community networks are also presented when they clarify certain information in the monitoring form.

MAIN RESULTS

Data collected will be presented in this section in the following order: 1) general results drawing up an overall profile of recipients (graduate and non-graduate) (Table 1); 2) results related to non-graduating recipients (tables 2 and 3); 3) results related to recipients who graduated six months ago (tables 4 to 6); 4) results related to recipients who graduated one year ago or more (tables 7 to 9).

OVERALL RESULTS

Excluding non-completed forms, 50 non-graduate recipients and 13 graduate recipients were monitored for the 2016-2017 academic year. Table 1 below shows the distribution of bursaries according to recipients' home region and their status. We can observe that more than a quarter (29%) of recipients monitored in 2016-2017 are from the Gaspésie-Îles-de-la-Madeleine region. It is also the region with the largest number of graduate recipients, closely followed by the Chaudière-Appalaches region.

Table 1: Distribution of 2014-2017 recipients by region according to their status – 2016-2017 academic year

Region	Community network	Number of non-graduate recipients	Number of graduate recipients	
			Graduated six months ago	Graduated one year ago

TOTAL		50	8	5

¹ A recipient from the region has never returned his monitoring form and is therefore not included in this table.

² A recipient from the region had his bursary withdrawn because he changed field of study. Data for that recipient are not included in this table.

³ A recipient from the region dropped out of school and is therefore not included in this table.

RESULTS RELATED TO NON-GRADUATING RECIPIENTS

Of the non-graduate recipients, thirteen will graduate over the next six months while four graduated fewer than six months ago.⁶ The latter recipients were monitored in the fall semester 2016 and have since graduated. Since their next follow-up will take place six months after their graduation, these recipients are identified as “non-graduate” for the purposes of this report. Thus, their post-graduation data will appear in the next bi-annual report scheduled for fall 2017.

Table 2 reveals that the majority (76%) of non-graduating recipients were awarded a Category 1 bursary and that a high proportion (58%) are enrolled in a university study program. Only one recipient is enrolled in a vocational training and all others (40%) are attending CEGEP.

Finally, non-graduating recipients monitored during the 2016-2017 academic year are enrolled in 12 different programs of study in the field of health and social services approved by the Bursary Program. The nursing program has the largest number of enrolled recipients across all levels of study. This program alone represents more than one-third (34%) of current recipients in the different selected Quebec regions. Medicine and diagnostic imaging programs are also at the top of the list with respect to the highest number of recipients., In the Lower Saint Lawrence and Capitale-Nationale regions, there are more recipients enrolled in medicine rather than nursing programs. (Table 3).

Before concluding our analysis of the results collected from non-graduating recipients, we must also consider the status of studies⁷ reported by the recipients based on information collected during the last round of follow-ups. One of the stipulations of the Bursary Program is that all recipients must be enrolled in a full-time program of study in the field of health and social services. Otherwise, penalties may be imposed. In violation of this stipulation, two recipients from the same community network claimed to be pursuing part-time studies. For this reason, the community network was interviewed to provide explanations for these students’ behaviour as well as the justifications leading the community network to accept this change of status. One recipient was granted part-time status due to recurring health problems experienced during the school semester which hampered the student’s attempt to pursue his program of study. The second recipient concerned chose to reduce his workload, considering that it was too demanding. For its part, the community network in charge

⁶ These were included in the table as non-graduate recipients, based on the monitoring forms completed in 2016-2017.

⁷ Full-time versus part-time.

of these recipients considers that no penalty need be imposed if a student's status changes during a school year for which no bursary has been awarded to that student.

RESULTS RELATED TO GRADUATE RECIPIENTS

A total of 13 graduate recipients were monitored in 2016-2017. Among them, eight graduated six months ago and five graduated at least one year ago. For the purposes of this report, data will be presented according to the following categories: 1) recipients who graduated six months ago and 2) recipients who graduated one year ago or more.

RESULTS RELATED TO RECIPIENTS WHO GRADUATED SIX MONTHS AGO

Of the eight recipients who graduated six months ago, six respected the Bursary Program's commitments and have a position in a health and social services institution in one of the selected Quebec regions (Table 4). Polled on their intentions for the next six months, five have expressed interest in continuing working in their current region.⁸ Only one (of the six) intends to go back to school.

For information purposes, of the six recipients employed, five had the opportunity to do an internship in their home region during their studies (Table 5). Four of them hold a position in that same region. Information related to the employment of graduate recipients has been gathered and presented in Table 6 below.

Among those (n=2) who are unemployed, one said that being hired is conditional upon his passing a theoretical test, while the other admits that he has found it difficult to get work in his region despite several steps undertaken. With a degree in nursing, this recipient intends to move outside his home region to find a job. He specified that he would first have to be granted the right to practice in the province of Quebec since his current license was obtained in the Maritimes.⁹ The recipient has informed his community network, which has not imposed any penalties on him as of yet.

⁸ One of them states that he intends to look for another position in the same region.

⁹ License obtained in New Brunswick. To get a job as a nurse in Quebec, the recipient must first become a member of the OIIQ.

Table 4: Distribution of 2014-2017 recipients who graduated six months ago by region, according to their employment status – 2016-2017 academic year

Region	Community network	Working in a public health and social services institution or related organization in the home region	Working in a public health and social services institution or related organization in another selected Quebec region	Not working in a public health and social services institution or related organization in a selected Quebec region	Continuing studies

RESULTS RELATED TO RECIPIENTS WHO GRADUATED ONE YEAR AGO OR MORE

As for the five recipients who graduated one year ago or more, two have found a full-time job in a selected Quebec region. One of them has now fulfilled his mandate according to the number of bursaries received.

Two other recipients reported returning to school in recent months. One of them first accumulated work experience for a few months, during which time he held a part-time position in a health facility.¹⁰ The latter continued his studies at a higher level in another field of study as soon as he graduated.

Finally, one of the five recipients was not able to get a job in his region and decided to pursue self-employment¹¹ in Ottawa, outside the province of Quebec. In return for allowing him to work in Ottawa, the community network sponsoring this recipient reached an agreement with him. He is to provide educational support services to English-language teachers at local schools and support services for English-speaking parents in the region.¹² These services will be offered via the community networks starting in spring 2017.

¹⁰ In a previous follow-up, this recipient was identified as a graduate recipient with a job.

¹¹ Occupational therapist.

¹² The reference is to the recipient's home region: Gaspésie-Îles-de-la-Madeleine (VGPN).

DISCUSSION

Over the years, the number of graduate recipients has increased, making it possible to evaluate the impact of the Bursary Program through the career paths of its recipients following their graduation. In 2016-2017, more follow-ups were conducted with newly graduated recipients than with recipients who graduated one year ago or more. Data obtained on their intentions for the coming months suggest a positive future for the Bursary Program.

Once again, the collaboration of the community networks testifies to the nature of their commitment to the Bursary Program. Although contacting recipients remains difficult, we were able to collect all the necessary data within the required timeframe. New approaches will be considered in order to reduce the barriers encountered, and at the same time, increase the efficiency of the monitoring process.

CONCLUSION

Data presented in this report are intended to contribute to the annual performance report submitted to Health Canada for 2016-2017. If the McGill team wishes to obtain additional information concerning the data collected, we would be pleased to provide them with the information that they require. We remain sensitive to the needs of the community networks involved in the project as well as those of the McGill team. Thus any information that is deemed important to collect as concerns the monitoring process will be taken into consideration when it comes to developing tools used for subsequent monitoring.

On the request of the McGill team, tables presenting the distribution of recipients for each cohort of the Bursary Program are appended to this report.

APPENDIX 1: PROFILE OF THE 2014-2015 COHORT
